

Texert and RiskBusiness International Announce Content Partnership to Offer Integrated GRC Platform and Risk Content Libraries

New York City, New York, United States

Texert and RiskBusiness International today announced an agreement to market the Texert J-Port® GRC platform with integrated risk and control Content Libraries and Taxonomy from RiskBusiness.

This integration offers clients an out of the box configuration of risk types, process types and control types that are mapped into existing industry standards for risks and controls. The Libraries comprehensively cover the detailed risk types and control types that are necessary to document the business environment from an Audit, Compliance or Risk Management perspective. The Taxonomy also integrates with the KRI Library's (www.KRIeX.org) taxonomy of risks, processes, products and service types.

Texert's J-Port GRC product provides customers with an innovative, market-leading product that provides a holistic view of risk across the corporate enterprise. It enables key stakeholders to identify, assess, manage and monitor risk and compliance. "We are now integrating market-leading content with J-Port's strong automated assessment and powerful risk correlation and aggregation capabilities," stated T. Curtis Holmes, Jr., President and CEO, Texert. "We can now offer our customers an out-of-the box solution that enables them to quickly integrate business risk information and compliance standards to support a strong enterprise and operational risk management framework. This powerful combination enables improved business analytics and performance across the enterprise."

The RiskBusiness Taxonomy and Risk Content Libraries were designed and developed by RiskBusiness and are a core component of its content management services. The Taxonomy provides users with comprehensive Libraries of content that are essential and form the backbone of a robust audit, risk or compliance program. The Taxonomy is supported with a set of online tools for fully integrated operations and support.

Jonathan Davies, RiskBusiness' Managing Director responsible for the Americas adds "Our content libraries provide a foundation for GRC integration. They act as a robust starting point for bringing together audit, risk and compliance management onto an integrated framework, to facilitate improved communication and analysis of risk."

Additional information on the Taxonomy and the integrated platform can be obtained from either Texert at www.texertinc.com or directly from RiskBusiness at www.riskbusiness.com.

About Texert

Texert is a leading provider of enterprise risk management (ERM) and compliance software solutions. Texert's J-Port GRC is the next generation Governance, Risk, and Compliance solution that enables a comprehensive, intelligent view of risk across the entire organization. RiskBusiness

About RiskBusiness International Limited

RiskBusiness is an international risk advisory firm specializing in the design and delivery of industry leading operational and enterprise risk management solutions. RiskBusiness provide advice, content, services and tools to individual institutions, industry associations and regulators. RiskBusiness content services are based on industry leading taxonomies and integrated classification structures. These are designed to facilitate the successful adoption of risk programs by business management and to enable the integration of governance, risk and compliance programs, through the use of a common language and structure for the organization of risk information. Our taxonomies include libraries of risks, controls, causes, processes and risk measurement/management metrics or KRIs. These services are supported by web-based ASP risk management, data collection and comparison and risk content delivery tools. Visit RiskBusiness on the Web at www.riskbusiness.com.
